

Appendix A

Figure A1: Expecting own circumstances worse next year, changes by education / subjective social class, 2004 – 2023 in Germany

Note: The figure shows the changes from 2004 to 2023 in the share of Germans with different social status who expected their personal employment situation (left) and the financial situation of their household (right) to be worse in the upcoming year. Figures a) and b) illustrate the changes by education and subjective social class, respectively. Data for subjective social class only available from 2012 and onwards.
