International Conference on Gears 2017

International Conference on
Gear Production 2017

International Conference on
High Performance Plastic Gears 2017

Europe invites the world

Time and venue:

September 13th to 15th, 2017,

Technische Universität München (TUM),
Garching (near Munich), Germany

VDI-Berichte 2294.1

International Conference on Gears 2017

Foreword 1

Gear Endurance – Tribology and Material

D. Talbot, Simulation of gear wear using a dynamic load 5
A. Kahraman distribution model

M. Ebner, Self-lubricating gears with oil-impregnated sintered 17
T. Lohner, materials
K. Michaelis,
B.-R. Höhn,
K. Stahl

L. Gondecki, Simulation and test method for the lubricant's influence 29
M. Weibring, on the wear and fatigue mechanisms on tooth flanks
P. Tenberge

A. Kubo Change of gear steel quality as function of globalization – 41
Back ground of the development for high speed
automatic hardness tester

Planetary Gear Systems – Design and Analysis

S. Grützner Holistic simulation of gearboxes – system simulation 51

S.-J. Tsai, Design of cycloid planetary gear drives with tooth 61
L.-C. Chang, number difference of two – a comparative study on
C.-H. Huang contact characteristics and load analysis

		Page
<i>A. Mihailidis, G. Korbetis, N. Drivakos, I. Nerantzis</i>	Finite element method based analysis of planetary gear systems considering backlash and manufacturing deviations	75
<i>B. Schlecht, T. Schulze, K. Riedel</i>	Tooth contact analysis under load on double helical-gearred planetary gearboxes	83
 Applications – Electrified Power Train		
<i>J. Yu, L. Yao, C. Ren, X. Yan, L. Lin</i>	Design and experimental validation on a novel tow speed transmission for electric bus	97
<i>A. Furtmann, G. Poll</i>	Electrical stress and parasitic currents in machine elements of drive trains with voltage source inverters	109
<i>B. Leupold, V. Janzen, G. Kotthoff, D. Eichholz</i>	Validation approach of PM gears for eDrive applications	119
<i>W. Wang, L. Han, Q. Yan, C. Xiang, Y. Li</i>	Research on the dynamic power split characteristics and the electric power coordinated control for a hybrid transmission system	131

Gear Endurance – Micropitting and Tooth Flank Properties

<i>N. Sagraloff, M. Hein, T. Tobie, K. Stahl</i>	Practical use of micropitting test results according to FVA 54/7 for calculation of micropitting load capacity acc. to ISO/TR 15144-1	143
<i>D. Ghribi, C. Peyrac, M. Octrue</i>	Shot peening of gear tooth flanks: Search for an optimal surface topography against the micropitting	153
<i>M. McCormick, J. Michaud</i>	Isotropic superfinishing of high hardness steels – How using a custom REM ISF [®] process as a quality control, defect remediation, and isotropic superfinishing procedure can increase the performance of Ferrium [®] C64 and other alloys	163
<i>C. Weber, T. Tobie, K. Stahl</i>	Investigation on the flank surface durability of gears with increased pressure angle	173

Planetary Gear Systems – NVH Behavior

<i>J. W. Vriesen</i>	Topographical tooth modifications in planetary gears for reduction of the noise excitation without load capacity loss – Optimization of complex systems capable of oscillation	185
<i>S. Stoyanov, V. Dobrev, A. Dobreva</i>	Investigating dynamic behavior of planetary gear trains through the systematic approach	197
<i>J. Neufond, Y. Xu, J. Perret-Liaudet, E. Rigaud</i>	The iterative spectral method for computing the planetary gear dynamic response	209

<i>S. T. Ping,</i> <i>Y. M. Shao,</i> <i>L. M. Wang,</i> <i>H. W. Li,</i> <i>J. Xu,</i> <i>Y. Cheng,</i> <i>J. Liu</i>	The influence of mesh misalignment on planetary gear set with time-varying mesh stiffness	219
--	---	-----

Applications

<i>A. Lohrengel,</i> <i>M. Heß</i>	Thrust cone bearings provide increased efficiency for helical gear units at moderate speed levels – Indications for possible energy saving potential in an expanded field of application	231
<i>M. Takahashi,</i> <i>T. Itagaki,</i> <i>N. Maeda,</i> <i>H. Takahashi</i>	Evaluation of developed micro-gear endurance test system and basic study on load-carrying characteristics of micro-spur-gears	243
<i>P. Tenberge,</i> <i>D. Kupka,</i> <i>T. Panéro</i>	Influential criteria on the optimization of a gearbox, with application to an automatic transmission	253
<i>H. Schreiber,</i> <i>T. Röthlingshöfer</i>	Kinematic classification of a gearbox comprising separate thrusting teeth and its advantages regarding existing approaches	267

Gear Endurance – Damage Initiation and Propagation

<i>C. Brecher, C. Löpenhaus, F. Goergen, D. Mevissen</i>	Crack propagation analysis of pitting damages of high-strength material systems in gear applications	281
<i>B. Schlecht, F. Müller, S. Schumann</i>	Simulation and measurement of tooth flank deviations on bevel gears caused by pitting and micro pitting	293
<i>M. Weibring, L. Gondecki, P. Tenberge</i>	Simulation of fatigue failure on tooth flanks in consideration of pitting initiation and growth	305

Planetary Gear Systems – Efficiency and Strength

<i>L. J. Stocco, R. Gloeckner</i>	Smashing the efficiency barrier – A practical comparison of planetary and orbitless gear-heads	319
<i>M. Nakagawa, D. Nishida, D. Sah, T. Hirogaki</i>	Development of novel test stand for three-axis driving planetary gear train control and analysis of novel PGT for noise reduction	331
<i>A. Kahraman, H. Ligata</i>	Effects of external splines on deformations of ring gears of planetary gear sets	341

Worm and Crossed Helical Gears – Simulation

<i>P. Norgauer, W. Sigmund, D. Kadach, K. Stahl</i>	Comprehensive simulation methods for crossed helical gear sets with the main focus on the calculation of contact patterns	353
<i>M. Oehler, B. Magyar, B. Sauer</i>	A new standardizable calculation method to predict the efficiency of worm gear drives	363
<i>J. Reißmann, E. Leidich</i>	Computation of the tooth root strength of Worm Wheels with a calculation program based on local stresses	373

Gear Endurance – Stress and Material Properties

<i>J.-A. Meis</i>	Flank fracture assessment under consideration of material quality	395
<i>C. Güntner, T. Tobie, K. Stahl</i>	“Alternative” microstructures and their influence on mechanical properties of case-hardened gears	399
<i>D. Liang, B. Chen, R. Tan, C. Li</i>	Tooth profiles design and stress analysis of double helical gear transmissions with geometric elements constructed tooth pairs	411
<i>C. Brecher, C. Löpenhaus, J. Pollaschek</i>	Influence of surface layer properties on tooth root bending strength of cylindrical gears	421

Bevel Gears

<i>P. Wang, M. Yang, Y. Guan, Z. Yang, Q. Li</i>	Global synthesis of speed increasing spiral bevel and hypoid gears	433
<i>Y. Cai, L. Yao, Z. Xie, J. Zhang, C. Peng</i>	Influence analysis of system parameters on characteristics of the nutation drive with double circular arc spiral bevel gears	435
<i>E. Erkilic, Z. Burcay Saribay</i>	Optimizing tooth proportions to improve top-land balance in aerospace bevel gears	447
<i>L. Liu</i>	Tooth contact analysis of a new type of face gear drive	457

Worm Gears – Design and Quality

<i>R. Müller, L. Schirmer</i>	New tolerance concepts for the realization of steel-only worm gears	467
<i>B. Sievers, M. Berger, J. Hermes</i>	Technical guideline for the quality determination of bronze	479
<i>Y. Wang, B. Peng, G. Liu, L. Liu</i>	Design of transmission accuracy of the involute cylindrical gear-worm gear system under large temperature difference based on FE method	491
<i>J. J. Liou, S. Rakuff</i>	The development of worm drives	503

NVH Behavior – Noise

<i>A. Carbonelli, J.-Y. Guerder</i>	Computing and minimizing the whining noise – Application to a bogie gearbox	517
<i>C. Zhang, H. Liu, C. W. Yao, Y. Li</i>	Study of vibration for spur gears of tooth profile modification and experimental validation of modification method	527
<i>C. Brecher, C. Löpenhaus, M. Schroers, T. Frech, P. Scholzen</i>	Optimization of NVH behavior of gears by alternative gear materials	539

Beveloid Gears

<i>C. Brecher, C. Löpenhaus, J. Brimmers</i>	Potential of free flank modifications for beveloid gears	553
<i>T. Schöler, H. Binz, M. Bachmann</i>	Method for the pre-dimensioning of beveloid gears – Efficient design of main gearing data	565
<i>H. Hansson H. Alm Grundström, A. Eng Stensson, M. Olsson</i>	Beveloid gears in planetary gear trains for increased power density and reduced backlash	579

Magnetic Gears

<i>S. Vonderschmidt,</i> <i>A. Vonderschmidt,</i> <i>R. Vonderschmidt</i>	A novel magnetic angular transmission	591
<i>D. Huang,</i> <i>L. Yao,</i> <i>W. Li,</i> <i>J. Zhang</i>	Geometric modeling and torque analysis of the magnetic nutation gear drive	603
<i>A. Şorea,</i> <i>F. Buus Bendixen</i>	Reluctance magnetic gear – Magnetic gears, no longer toothless	615

NVH Behavior – Dynamic Behavior

<i>B. Guilbert,</i> <i>P. Cutuli,</i> <i>P. Velez</i>	Hybrid dynamic model of hollow thin-rimmed gears	623
<i>E. Rigaud,</i> <i>P.-H. Cornuault,</i> <i>B. Bazin,</i> <i>E. Grandais-Menant</i>	Prediction of the vibroacoustic response of an electric window-lift gear motor	635
<i>S. Jain,</i> <i>B. James</i>	A simulation approach to calculate gear dynamic-factors for high-speed applications	649
<i>B. Schlecht,</i> <i>C. Ulrich,</i> <i>J. Bräunig</i>	Investigations on the influence of anisotropic material properties of gear teeth on their macroscopic behavior	659

Hypoid Gears

<i>T. Aoyama, H. Inokura, Y. Shibata</i>	Prediction of plastic deformation in hypoid gears	669
<i>M. Daffner, M. Otto, K. Stahl</i>	Elastic deformation of a hypoid gearbox – Measurements on a static test rig to validate the calculated elastic deformation behavior	683
<i>T. Utakapan, B. Kohn, M. Fromberger, M. Otto, K. Stahl</i>	Evaluation of gear noise behaviour with application force level	695
<i>J. Thomas, C. Wirth</i>	Determination and improvement of bevel gear efficiency by means of loaded TCA	707

Gear Endurance – Geometry

<i>Z. Roth J. Opferkuch</i>	High load capacity gear root fillet contour with a bézier curve	719
<i>R. Saito, Y. Suzuki, K. Matsuo</i>	The effect on tooth root breakage strength of tooth root shapes resulting from differing hobbing conditions	733
<i>A. L. Kapelevich Y. V. Shekhtman</i>	Root fillet optimization of thin rim planet gears with asymmetric teeth	741
<i>D. Krüger, E. Leidich, I. Römhild, R. Heß, H. Linke</i>	Geometry, pitting and tooth root capacity of asymmetric gears	751

Load-sharing – Load Distribution

<i>M. Shuai,</i> <i>M. Shuai,</i> <i>J. Guoguang,</i> <i>Z. Yidu,</i> <i>L. Chao,</i> <i>H. Haruo</i>	Research on multiple-split load sharing characteristics of 2-stage external meshing star gearing system	769
<i>J. Papiés</i>	Load distribution in planetary gears considering effects of manufacturing tolerances with a statistical approach	783
<i>J. I. Pedrero,</i> <i>M. Pleguezuelos,</i> <i>M. B. Sánchez</i>	Load sharing model for spur gears with tip relief – An investigation on the influence of profile modifications on the mesh stiffness	795
<i>L. Geng,</i> <i>N. Mimi,</i> <i>L. Lan,</i> <i>Z. Ying,</i> <i>W. Liyan</i>	Mesh stiffness of cylindrical gear including tooth surface – Friction based on FEA method	807

Non-involute Tooth Profiles

<i>S. Ishikawa,</i> <i>Y. Murayama,</i> <i>S. Kishi</i>	A strain wave gearing with a new profile of teeth	815
<i>E. Chiappetta,</i> <i>D. Morrey</i>	Non-standard spur gear tooth profiles for improved epicyclic gear system performance in low speed applications	825
<i>Y. Zhao</i>	Curvature interference characteristic of conical surface Enveloping Spiroid	835

Condition Monitoring and Diagnostic

<i>E. Tanaka, H.-C. Lin</i>	Gear diagnostic system using zonal laser beam for practical use	845
<i>T. Nagumo, M. Ishizuka, Y. Satou, S. Matsumura, H. Houjoh</i>	Estimation of loaded static transmission error using vibration measurement under operating conditions in a two-stage helical gear reducer	857
<i>D. Iba, S. Futagawa, T. Kamimoto, M. Nakamura, N. Miura, T. Iizuka, A. Masuda, A. Sone, I. Moriwaki</i>	Print of crack detection sensor for spur gears by laser sintering of conductive ink	869

Efficiency

<i>F. Concli, C. Gorla</i>	Numerical modeling of the churning power losses of gears: an innovative 3D computational tool suitable for planetary gearbox simulation	881
<i>T. Jurkschat, T. Lohner, K. Stahl</i>	Improved calculation method for load-dependent gear losses	893
<i>Y. Shen, S. Rinderknecht, M. Hoppert</i>	General modelling method of power losses in transmission with parameter identification	905
<i>B. Bauer, R. Hambrecht, A. Kube</i>	Thermal analysis and optimization of gearboxes by simulation	917

Transmission Error

<i>P. Garambois,</i> <i>E. Rigaud,</i> <i>J. Perret-Liaudet</i>	Robust optimization of gear macro and micro-geometries in order to minimize static transmission error and gear stiffness fluctuations	927
<i>L. Zhao,</i> <i>R. C. Frazer,</i> <i>B. A. Shaw</i>	The influence of overlap ratio on transmission error in parallel axis gears	939
<i>J. Champain,</i> <i>S. Dalle,</i> <i>M. Octrue</i>	Simultaneous experimental characterization of dynamic transmission error to noise and vibration behavior of a gear system under load	953

Materials

<i>J. Lohmiller,</i> <i>J. Hoffmeister,</i> <i>J. Hermes,</i> <i>M. Ansorg,</i> <i>H. Dhonau</i>	Development and investigation of austempered ductile iron (ADI) for thick-walled gear components	963
<i>C. Gorla,</i> <i>E. Conrado,</i> <i>F. Rosa,</i> <i>F. Concli</i>	Austempered Ductile Iron (ADI) for gears: manufacturing, performances and tests	977
<i>M. Schwenk,</i> <i>J. Hoffmeister,</i> <i>J. Hermes</i>	Prediction of local load carrying capacity for gears – a materials science approach	989

Quality / Measurement

<i>M. W. Seidel, A. Zösch, K. Härtel</i>	Grinding burn inspection – tools for supervising and objectifying of the testing process	1003
<i>A. von Freyberg, A. Fischer</i>	Automatic geometry segmentation of involute flank regions	1015
<i>G. Goch, K. Ni, Y. Peng, A. Günther</i>	Paradigm change in cylindrical gear metrology using areal measurement and evaluation	1025
<i>K. Kanto, T. Yamada, S. Komatsu, J. Morishita, I. Yamaji, A. Kubo</i>	Non-contact measurement of 3D tooth flank form accuracy of bevel gears on 5-axis machining center	1039

Reliability

<i>U. Kissling, M. Stangl</i>	The documentation of gearbox reliability – an upcoming demand	1051
<i>H. B. Endeshaw, S. Ekwaro-Osire, F. M. Alemayehu, J. P. Dias</i>	Estimation of remaining useful life of gears with uncertainties in loading and material parameters	1063
<i>M. Hein, T. Tobie, K. Stahl</i>	Test method for time-scaled fatigue tests of gear transmission systems	1073
<i>D. Strasser, S. Troll, R. Sperlrich, J. Münch</i>	Reliability safeguarding for an 8 MW wind energy gearbox in serial production – Prototype and process development ensuring stable quality at the highest level	1085

Poster Exhibition

<i>F. Yang, W. Bi</i>	Efficiency evaluation of multi-speed transmission	1101
<i>A. K. Shojaei, P. Volgers</i>	An improved lifetime prediction technique for plastic gears through finite element analysis and continuum damage mechanics	1109
<i>H. J. Stadtfeld</i>	Pentac® Mono-RT high performance face milling cutter heads	1113
<i>O. Berka, M. Dub, F. Lopot</i>	Experimental measurement of gears impact in transmission	1119
<i>C. Peng, C. Li, B. Chen</i>	Development of a test rig for transmission performances of precision planetary reducer	1127
<i>R. Nemoto, E. Tamura, N. Seyama, E. Tanaka</i>	Friction loss and surface durability of WN gears – A Comparison with involute gears	1133
<i>E. Tamura, R. Nemoto, N. Seyama, E. Tanaka</i>	Load carrying capacity of crossed helical gears with high contact ratio	1139
<i>B. Schlecht, K. Neikes, E. Leidich, S. Hauschild</i>	Is the mean stress effect for shafts dependent on the geometry, material or load?	1145
<i>X. Kai, L. Guolong</i>	A compensation method of tooth surface error in continuous generating grinding based on the virtual-axis	1153
<i>J. Langhart, I. Zotos, G. Franzoso</i>	Casing stiffness variations and influence on the gear meshing properties	1161

		Page
<i>I. Atanasovska, H. Abderazek</i>	Comparative analysis of few new procedures for spur gears tooth profile optimization with different methods and aspects	1169
<i>X. Gou, L. Zhu, C. Qi</i>	Modelling of a gear-rotor system considered tooth contact temperature and its dynamic characteristics	1177
<i>T. Saito, K. Miyamoto</i>	Traction drive analysis identified with rheological friction property of traction fluid	1185
<i>K. Togai, N. Fujinaga</i>	A reduced order internal combustion engine model for transmission development	1191
<i>A. Miltenović, M. Banić, Ž. Mišković, R. Mitrović, V. Miltenović</i>	Prediction of heat generation in transmission bearings by application of FEM	1199

Conference on Gear Production 2017

Intelligent Gear Production

<i>M. Brumm, H. Müller</i>	Cyber physical gear production system – Vision of industry 4.0 gear production	1209
<i>K.-H. Schoppe</i>	IoT and I4.0: electronic live tool integrated monitoring (eltimon)	1219
<i>H. Yakaria</i>	Gear Data Exchange (GDE) – goLive	1235
<i>B. Winter</i>	Production cells in transition	1247

Potential of Powder Metallurgy (PM) Process Chains

<i>B. Kianian, C. Andersson</i>	Sustainability-conscious Powder Metallurgy gear manufacturing – An analysis of current manufacturing challenges	1251
<i>T. Frech, C. Löpenhaus, F. Klocke</i>	Influence of the contact conditions in cold rolling on the density profile of powder metallurgical (PM) gears	1265
<i>V. Angelopoulos, M. Hirsch</i>	PM gear rolling simulations using advanced plasticity material model and improved initial conditions	1277
<i>P. Kauffmann, P. Schäflein, V. Heuer</i>	PM technology for the future powertrain	1289

Manufacturing Related Product Properties

<i>R. Meissner, M. Liewald, T. Benkert, M. Hiller, W. Volk</i>	Multi-component gearwheels and their manufacturing processes	1299
<i>M. F. Stangl, U. Kissling, A. Pogacnik</i>	A procedure to find best fitting dresser with grinding worm for a new design	1307
<i>B. Kohn, T. Utakapan, M. Fromberger, M. Otto, K. Stahl</i>	Flank modifications for optimal excitation behaviour	1319

Advances in Cylindrical Gear Production

<i>K. Matsuo, Y. Suzuki, K. Fujiki</i>	Accuracy analysis of workpiece and tool in the hobbing process using Taguchi Method	1331
<i>C. Gosselin, E. Fritz, L. Seiler</i>	CnC manufacturing of circular faced cylindrical gears	1343
<i>C. Andersson</i>	Grinding or shaving? – Performance based economic decision support in the manufacturing of gears	1353
<i>M. Ophey, F. Klocke, C. Löpenhaus</i>	Approach for modeling grinding worm wear	1365

Advances in Bevel Gear Production

<i>I. Moriwaki, R. Kikuchi, D. Iba, M. Nakamura, M. Nagatsuka</i>	Contact pattern control with simple cutter motion in face-milling of zerol bevel gears using 5-axis machine	1379
<i>E. Böyükbaş, H. J. Stadtfeld</i>	Surface structure shift for ground bevel gears	1391
<i>B. Schlecht, F. Rudolph, S. Schumann</i>	Experimental studies and simulation of hypoid gear lapping	1403

Innovative Materials and Treatments

<i>K. Tsujii, R. Ishikura, K. Inoue, Y. Tanaka, T. Morita</i>	Effect of alloying elements on edge part over-carburizing in vacuum carburizing	1415
<i>C. Brecher, C. Löpenhaus, R. Greschert</i>	Influence of the grinding process on the formation of boundary layers on gears	1427
<i>G. Eitzinger</i>	Adaptive coatings on gears for NVH improvement	1439
<i>B. Zhmud, J. Blomkvist, M. Fallström</i>	An advanced thermal processing & coating process for enhancing gear tribology	1451

International Conference on High Performance Plastic Gears 2017

Possibilities and Potentials of Plastic Gear Applications

<i>J. Strüber</i>	Design of plastic micro gear teeth for mass production with high manufacturing tolerances for a medical device	1463
-------------------	--	------

Tribology of Plastic Gears

<i>A. Bormuth, J. Zuleeg, C. Schmitz, R. Schmitz, M. Pfadt, H. Meven</i>	Lubrication of plastic worm gears	1473
--	-----------------------------------	------

		Page
<i>E. Maier, A. Ziegltrum, T. Lohner, K. Stahl</i>	Characterization of TEHL contacts of thermoplastic gears	1483
<i>M. Scherge, S. Abdel Wahed, C. Koplín, R. Jaeger</i>	Lubricant – Polymer interactions of plastic gears	1497
<i>M. Kanters, B. van Wissen, R. Nickel</i>	Relevant tribological testing method for high performance plastic gears	1507

NVH of Plastic Gears

<i>M. Koop, E. Melnikov, V. Merz</i>	Design investigations and indications for acoustical optimized gear meshes using plastic gears	1519
<i>J. Fechler, M. Böhm, S. Aberle, V. Merz</i>	A contribution to the NVH behavior of plastic gears in automotive applications	1531

Comparison of Typical and Future Materials

<i>A. Pogacnik, S. Beermann</i>	Measuring permissible root/flank stress of plastic gears according to the VDI 2736-4	1541
<i>J. Cathelin, R. Janssen</i>	Material data for advanced plastic gear simulation	1553
<i>R. Weidig</i>	Adoption of polymer gears – Challenges and solutions	1565

Limits and Chances of Shape and Form

<i>A. K. Shojaei, P. Volgers, M. Cassata</i>	Advanced modeling and experimental techniques for fatigue life prediction of plastic gears	1575
<i>G. Hlebanja, S. Kulovec, D. Zorko, J. Hlebanja, J. Duhovnik</i>	Influence of the tooth flank shape on thermal load of the gear	1583
<i>M. Baar, P. Oster, T. Tobie, K. Stahl</i>	Theoretical investigations of the load distribution of small sized crown gear sets different material pairings	1593

Load Carrying Capacity of Plastic Gears

<i>B. Černe, D. Zorko, J. Duhovnik</i>	Semi-analytical method for the prediction of the flank temperatures of polymer gears during running	1611
<i>K. Mao, V. Goodship, N. Madhav, R. Ramakrishnan, P. Langlois</i>	Experimental Investigations of Polymer Composite Gear Performance	1625
<i>M. Kalin, A. Kupec</i>	Wear and Fatigue Behaviour of Polymer Gears under Controlled Temperature Conditions	1637
<i>C. Hasl, P. Oster, T. Tobie, K. Stahl</i>	Bending strength of oil-lubricated cylindrical plastic gears – Modified bending strength calculation based on VDI 2736	1649
