An algorithm is understood as a series of logically ordered
instructions for solution of a specific problem and the step-
by-step procedure or instructions or directions to perform
an activity. The article explains, with examples, the steps
concerning the two stages of the process of subject analysis
of a document, namely a) establishing and stating, in natural
language, the topic treated in a text, and b) translating the
specific subject statement into a documentary language ex-
pression according to the rules of its grammar.

case of string indexing. Indexer I4(1985)No.4, p.255-6, 11refs.
String indexing, as used in PRECIS and the PRECIS Translingual
Project can be more customized by using the quick-response pos-
sibilities of microcomputers. As hardware is now far ahead of
theory and research of its applications, practical problems
must be solved, such as user-options, index display formats.

The test carried out by the FID/BSO Panel in collaboration with the University of London Central Information Service 1982/83, investigated the effect upon retrieval of the use, during the referral step of online searches, of an index to 36 data bases in the DIALOG host system. The index was prepared by converting the individual data base category codes or subject summaries to a common form via BSO. The results sugest that while the BSO-based index would not effectively substitute for the dialogue between intermediaries and enquirers and with the machine system, its effect was that more data bases were consulted than in conventional referral, and that the level of performance over a set of requests is less variable when such a lexical tool is used in referral.

(Terminology and related fields) Orig. de,en. Wien-Köln-Graz:
Böhlau 1985. 285p., ISBN 3-205-02025-1
The volume was dedicated to Prof.Felber at the occasion of
the 2nd Infoterm Symposium, Wien, April 15, 1985 in recogni-
tion of his contributions to the field of terminology during
the last 20 years and his 60th birthday on April 30, 1985. His
life and work is depicted in a first contriubtion of this vol.
by C.Galinsky, followed by his personal bibliography (p.25-36)
by G.Krauter. The introduction into this chapter was given by
W.Nedobity. H.-J.Plehn, K.W.Schneider and A.Donko provided
further descriptions of his life. J.A.8achrach, E.Düibell and
K.Kehrer wrote contributions on Infoterm, its foundation and
its work. There are also introductions to further 4 chapters.

of James L.Dolby ("Meaning from Data: Implications for data
analysis and database management systems", AAAS Meeting, De-
troit, MI 1983): "Dolby argues that the correctness of data
and data analysis involves correctness in meaning and that
the correctness in meaning goes beyond matters of computer
program correctness or the numerical accuracy of data. His
approach concentrates on the use of classification structures
to extend the fonnal treatment of meaning in computer-based
data systems, and he has shown how such extensions can expose
or reduce ambiguities and inconsistencies of meaning in such
systems".
