

Wikipedia Gender

female/male number of editors in wikipedia articles

A recent [NYTimes article](#) pointed that contribution at Wikipedia has a strong gender bias, with more than 6.7 male editors than female editors per article (based on a survey). [Many other articles came out](#), and [Wikimedia is reacting](#) to this rather negative statistics.

Using the [gender app](#) that I discovered in [this project](#), I wanted to see the relations between the proportion female/male editing and article and its content. I wanted to check, for instance, if stereotypes are validated.

research project by [Santiago Ortiz](#)

- tv programs
- films (highest grossing + academy awards)
- books (best selling)
- emotions
- cities
- sports
- my selection (arbitrary, trying to find extremes)
- most edited articles
- most visited articles
