

Author Bios

Brantz, Dorothee, is Professor of urban history and Director of the Center for Metropolitan Studies at the Technische Universität Berlin. Her research centers on the historical and contemporary dimensions of urban environmental transformations, human-animal relations, and the history of warfare. Brantz is also particularly interested in questions of temporality in the urban context. She has published widely on urban greenspaces, animals in the city and the role of landscapes in the two world wars. Currently she is working (together with Avi Sharma) on a DFG-funded project on urban seasonalities.

Danneels, Koenraad, is a PhD candidate in urban history and spatial planning at the University of Antwerp. His research is positioned at the nexus of urban history, landscape architecture, biology and ecology. In his doctoral dissertation he explores the complex translation of ideas from the sciences to urbanism in Belgium through various case studies spanning the twentieth century, focusing on discourses, networks and designs.

De Block, Greet, is Professor in urban studies and urban history at the University of Antwerp. De Block's work focusses on infrastructure as driving force of urbanization, taking an interdisciplinary approach that links urbanism with urban history, science technology and society studies (STS), political geography, and landscape studies. Her recent work examines the parallels between contemporary resilient design and earlier socio-spatial schemes dealing with uncertainty and risk in the context of rapid urban transformations.

Kunkel, Sönke, is Junior Professor of North American history at Freie Universität Berlin. His research focuses on the history of development and North-South relations, including its overlaps with the history of international organizations. His further research addresses the role of knowledge, global science, and mass media in international relations. Kunkel has published on the history of international organizations and their development strategies, global politics and media coverage.

Liedtke, Florian, is a PhD candidate at the Institute for Sustainable Urbanism, Technische Universität Braunschweig, and holds degrees in architecture and historical urbanism. His academic work focuses on disaster resilience and urban reconstruction in Japan as well as on the urban morphology of Tokyo and Seoul. Since 2016, Florian has served as chairperson of the NGO German – Japanese Synergy Forum, which co-sponsors multidisciplinary summer schools in Japan, with a special focus on urban disaster resilience.

López, Marcela, is a geographer with an interdisciplinary background in urban and environmental studies, and an affiliated researcher at the Center for Metropolitan Studies. She received her PhD in geography at the Freie Universität Berlin (2016). Her research explores how social and ecological inequalities can be productively conceptualized and explained through contestations that emerge over the control and access over water resources. López is the founder of Contested Urban Waterscapes (contestedurbanwaterscapes.net), a platform, which promotes public dialogue and interdisciplinary exchange between scholars, social movements and public service providers to search for alternatives to reduce inequalities in access to water.

Maudsley, Ann, is a built environment researcher at ArkDes, Sweden's National Centre for Architecture and Design. She received her PhD in urban planning from the University of Melbourne (2015). Maudsley's research focuses on how attributes of urban form react to change. This research includes examining the imagined plans and designs of Arctic settlements, and the factors that have affected their sustainability and resilience. Maudsley's experience in research is coupled with teaching and work in practice in built environment fields. She has worked in the academic, public, cultural and non-profit sectors in Melbourne, London and Stockholm.

Moss, Timothy, is a Senior Researcher at the Integrative Research Institute on Transformations of Human-Environment Systems (IRI THESys) at the Humboldt University of Berlin, where he leads the research group Urban Infrastructures and Human-Environment Relations. His research draws on relational and socio-spatial concepts from urban geography and science and technology studies to analyze past infrastructural trajectories. Conversely, he uses analysis of the past as a source for critical reflection on current urban networked infrastructures. He is particularly interested in how energy, water and ICT infrastructures reproduce the multiple geographies, power relations and socio-materialities of a city.

Notteboom, Bruno, is an Associate Professor at the Faculty of Architecture of KU Leuven. His current research deals with the relationship between design, (ecolog-

ical) science, society and politics, from both a historical and a contemporary perspective. His research team focuses on the relationship between urban planning, ecological design and citizen's practices in the Brussels Capital Region. His most recent book deals with landscape transformation in Flanders.

Sharma, Avi, is a Senior Research Fellow and Assistant Professor at the Center for Metropolitan Studies at the Technische Universität Berlin, where he works on topics in urban environmental history, migration and forced migration among other topics. Sharma is the author of numerous articles on topics including public health in Germany; the UN SDGs in historical context; postwar urban history; and urban environmental history. He is currently working on an urban environmental history of (refugee) camps as part of a DFG funded project (with Dorothee Brantz) on urban seasonality.

Silva Ardila, Diego, is a Professor of Urban Studies at the Universidad del Rosario, Bogotá, Colombia. Silva is the former deputy director of the Colombian National Statistical Office (DANE) and board president of the Colombian National Geographic Institute (IGAC). He is also an advisor for the Development Plan of Bucaramanga, a consultant for UN-Habitat, the Inter-American Development Bank, and the policy think-tank CEPEI. His current research interests focus on urban policy mobilities and metropolitan governance in Latin America.

Wesener, Andreas, is a Senior Lecturer in urban design at Lincoln University (New Zealand). He studied architecture at the Hochschule Bochum, the Bartlett School of Graduate Studies, University College London, and was awarded his doctorate from the Bauhaus-Universität in Weimar (2013). Wesener's research focusses on the interplay between social, political, and economic processes, human experiences and the physical built environment. He investigates processes, structures and meanings that characterize urban environments in times of rapid transition.
