Figure A.5: Average Treatment Effects on the Evaluation of Emotionality

Note: Figure displays coefficient plots with 95-percent confidence intervals. The dependent variable is measured as a semantic differential ranging from emotional to rational.

Figure A.6: Average Treatment Effects on the Evaluation of Politeness

Note: Figure displays coefficient plots with 95-percent confidence intervals. The dependent variable is measured as a semantic differential ranging from impolite to polite.

Figure A.7: Average Treatment Effects on the Evaluation of Agitation

Note: Figure displays coefficient plots with 95-percent confidence intervals. The dependent variable is measured as a semantic differential ranging from calm to agitated.

Figure A.8: Average Treatment Effects on the Evaluation of Aggressiveness

Note: Figure displays coefficient plots with 95-percent confidence intervals. The dependent variable is measured as a semantic differential ranging from aggressive to peaceful.

Figure A.9: Average Treatment Effects on the Evaluation of Arrogance

Note: Figure displays coefficient plots with 95-percent confidence intervals. The dependent variable is measured as a semantic differential ranging from arrogant to modest.
