

About the authors

Prof. dr. **Robert Beeres** is professor of defence economics at the Faculty of Military Sciences, Netherlands Defence Academy. He holds a PhD in administrative sciences from Radboud University Nijmegen, the Netherlands. His research interests include economics of arms export controls, defence capabilities, performance management and burden sharing within the EU and NATO. He has published numerous articles in peer-reviewed journals and books and co-edited several books.

Colonel Dr. **Robert Bertrand**, RA, RC, RO is a colonel in the Royal Netherlands Marechaussee and associate professor of Accounting, Control and Defence Economics at the Faculty of Military Sciences, Netherlands Defence Academy. He joined the Royal Netherlands Air Force in 1995 and switched to the Royal Netherlands Marechaussee in 2009. He defended his PhD on contract audits in 2016 at Maastricht University. His current research interests focus on auditing, compliance, internal control, ethics and leadership.

Laura Birkman is Senior Strategic Analyst and Head of the Climate and Security Programme at The Hague Centre for Strategic Studies (HCCS). She is a member of the management team of the Water, Peace and Security Partnership and leads the consortium's engagement in Iraq. She is also a member of the International Military Council on Climate and Security. Her recent publications focus on the water and security nexus in Iraq and the causal methods and approaches that support smarter climate-related interventions. Prior to HCCS, Laura worked at an international research consultancy where she led the firm's engagement on disaster risk management, with a special focus on the EU. She started her career with the Dutch government, where she focused on food security, biodiversity, and trade policy. During this time, she was a lead negotiator at the UN CBD and the FAO; and served as Agricultural Attaché at the Netherlands Embassy in Moscow. Laura holds master's degrees from Harvard University, the University of Amsterdam, and the University of St Andrews. She is a former NAF-Fulbright and HSP Huygens scholar, and currently serves on the board of directors of the Harvard Alumni Association and the advisory committee of the Netherlands-America Foundation.

Prof. Dr. Myriame Bollen is full professor of Civil-Military Interactions at the Faculty of Military Sciences of the Netherlands Defence Academy. She has been the chair of the Department of Military Management and Organisation, chaired the programme board of the European Joint Master in Strategic Border Management, and was a visiting professor at the Baltic Defence College, Estonia. She has been the editor of two books and has published in a broad range of journals. Her recent research focuses specifically on military assistance to civilian authorities in times of crisis.

Dr. Marion Bogers is assistant professor of defense economics at the Faculty of Military Sciences, Netherlands Defence Academy. Her research interests include performance management and burden sharing within security alliances.

Esmée de Bruin is PhD candidate and lecturer at the Faculty of Military Sciences. She holds a degree in international economics and international law. Her research focuses on the effectiveness of export control regimes, the Arms Trade Treaty, and non-proliferation treaties. Further, she analyses the effect of these instruments on conflict and human suffering.

Tristan Burwell, is a research associate for the Climate Change and Insecurity Project. As a British Army Officer, Tristan undertook a variety of leadership and management roles, including two deployments to Afghanistan, training appointments and global operations management. He spent the last three years of his 13-year military career on exchange with the Italian Armed forces in Rome and Naples before leaving as a Major in 2022.

On leaving the Army, Tristan worked as a lead consultant on United Nations climate security projects. He predominantly worked with the International Organisation for Migration to mitigate the negative impact of climate change on natural resource access in Somalia, with a specific focus on reducing inter-clan conflict over water and pasture land. He now works on issues of sustainable investing.

He has an MA in Global Diplomacy from London University (SOAS) and a Master's in International Strategic Military Studies from the University of Turin. Awarded the British Army's Farmington Fellowship, he researched the role of non-state actors in processes of security sector reform at the University of Oxford. Having been awarded a bursary, Tristan is also an MBA candidate at Warwick Business School where his electives focus on sustainability and entrepreneurship. His dissertation is analysing the role of the private sector in finding climate adaptation.

Timothy Clack is the Chingiz Gutseriev Fellow at the University of Oxford and an associate fellow of the Centre for Historical Analysis and Conflict Research (CHACR). Tim's anthropological work has focused primarily on issues of conflict, identity, and heritage in various parts of the world, including the Horn of Africa, Central Asia, and the South Atlantic. Tim is the Director of the Climate Change & (In)Security Project, a collaboration between Oxford and CHACR. He is the General Editor of the Routledge Advances in Defence Studies (RAiDS) book series and co/editor of numerous books including: *Climate Change, Conflict and (In)Security* (2023); *Cultural Heritage and Armed Conflict* (2022); *The World Information War* (2021); *Before Military Intervention* (2018); and *At the End of Military Intervention* (2015).

Dr. Andrea Coraddu was born in Pietrasanta in 1979. He was awarded a Laurea degree in Naval Architecture and Marine Engineering from the University of Genoa in 2006, followed by a Ph.D. from the University of Genoa's School of Fluid and Solid Mechanics, where he focused on Modelling and Control of Naval Electric Propulsion Plants. He currently serves as an associate professor in the Maritime and Transport Technology Department at Delft University of Technology. Throughout his career, he has held various academic and research positions, including roles as associate professor at the University of Strathclyde, research assistant at Newcastle University's School of Marine Science and Technology, senior research engineer at DAMEN Research and Development Department in Singapore, and Post Doc research fellow at the University of Genoa. Dr Coraddu has successfully secured grants from research councils, industry partners, and international governmental agencies. His research primarily focuses on designing, integrating, and controlling complex marine energy and power management systems. His work contributes to the development of advanced, multi-functional vessels, addressing environmental concerns related to human activities in the marine environment.

Dr. ir. Edwin Dado is associate professor of Civil Engineering at the Faculty of Military Sciences of the Netherlands Defence Academy. His research interests include water management, design principles, process management, systems engineering, and Construction IT applied in a military context. After an initial career at an engineering firm, he obtained a PhD at TU Delft.

Dr. Martijn van Ee is assistant professor of mathematics and operations research at the Faculty of Military Sciences of the Netherlands Defence Academy. His research focuses on combinatorial optimisation and military operations research.

Prof. dr. **Paul C. van Fenema** is professor of defense logistics at the NLDA. He received his PhD from RSM Erasmus University and worked for this university as well as Florida International University and Tilburg University. His research focuses on interorganisational cooperation in logistics, combinatory analytics, service networks and digital innovation. He has published in *Organization Science*, *MIS Quarterly*, *Joint Forces Quarterly* and *International Journal of Management Reviews*.

Prof. dr. ir. **Georg Frerks** held the chair of Conflict Prevention and Conflict Management at Utrecht University and the chair of International Security Studies at the Netherlands Defence Academy till his retirement in 2021. Till mid 2014 he also held the chair of Disaster Studies at Wageningen University, the Netherlands. Frerks served for nearly twenty years in the Dutch Foreign Service both at the headquarters and abroad. He also was head of the Conflict Research Unit of the Netherlands Institute of International Relations 'Clingendael' in the Hague. Frerks focuses on conflict and conflict management as well as on international and national conflict-related policies and interventions, and the international security architecture. During his period at Wageningen University he worked on natural and man-made disasters and humanitarian emergencies. Recently, he has worked on rebel governance especially by the Liberation Tigers of Tamil Eelam (LTTE) in Sri Lanka. Frerks has (co-)authored or (co-)edited 25 academic books, over 120 journal articles and book chapters, and 90 policy reports and monographs in his field of expertise. Frerks has directed or participated in various policy-related studies and evaluations in the field of conflict and peacebuilding and participated on the boards of several national and international conflict and peace related NGOs.

Commander (E) dr. ir. **Rinze Geertsma** (CEng, FIMarEST) was born in Kollum, the Netherlands in 1975. He received his MSc. degree in Marine Engineering at University College London, UK, in 1999, and obtained his PhD degree from Delft University of Technology, the Netherlands, in 2019 with his thesis on 'Autonomous Control for Adaptive Ships with Hybrid Propulsion and Power Generation'. He is currently assistant professor in Military Energy Systems for Ships with the department of Military Technology at the Netherlands Defence Academy, Breda, and guest researcher at Delft University of Technology, the Netherlands, with a research interest in military energy systems for naval vessels. He previously has been marine engineering officer of HNLMS de Ruyter and HNLMS Tromp. Earlier experience includes system and project engineering and innovation roles.

Alex Grasman was born in Sneek, the Netherlands, in 1990 where he soon became inspired by boats and yachts and found out that he wanted to become a yacht designer. After high school, he moved to the UK and obtained his Bachelor degree in Yacht and Powercraft Design at Southampton Solent University in 2011. Soon after that he started a job as a naval architect at Van Oossanen in Wageningen, where he performed conceptual and basic design of large motor yachts. Whilst working on a different project for a hybrid ferry for Lake Geneva, he became inspired by Power Systems and Energy Carrier developments. Feeling the need for a change and the importance of the maritime energy transition in 2019, he started his current position at MARIN (Maritime Research Institute Netherlands) as a Specialist in Marine Power & Energy Systems. His work focuses on how future Power & Energy Systems can be assessed, compared, and integrated in ship designs. He works on tools to compare technologies and give ship owners, yards and design offices insight into the pros and cons associated with these technologies.

Wessel Groote Schaarsberg is an officer at the Royal Netherlands Air Force. He recently graduated from the Netherlands Defence Academy with a bachelor's degree in Military Systems and Technology.

Marine de Guglielmo Weber is a research fellow in the Climate, Energy and Security program at IRIS and scientific director of the Defence and Climate Observatory. She works on strategic and security issues related to climate change. She also specialises in the study of technological responses to climate change, including weather and climate modification practices and techniques. She holds a PhD in Information and Communication Sciences on cloud seeding at the Centre d'études sur les médias, les technologies et l'internationalisation (CEMTI) of the University of Paris 8.

Lieutenant Colonel **Sieds Haitsma**, MSc, BA is an assistant professor of defense logistics at the NLDA. He started his military career in the Royal Netherlands Air Force in 2001. He had several positions at Leeuwarden Air Base and worked for the F-35 Procurement Program. Before his current position he worked at the Staff of Netherlands Ministry of Defense. Since 2022, he has been working for the NLDA and tutoring military logistics.

Erwin Hardeman, LL.M., MSc, RA is head of the Professional Practice Department at PKF Wallast Accountants and Tax Advisors and lecturer/PhD-candidate at the Department of Accounting and Information Management, School of Business and Economics, Maastricht University. His current research interests focus on auditor liability and audit quality.

Saskia Hollander is a senior research fellow at the EU & Global Affairs Unit at Clingendael. Her research revolves mainly around EU governance & politics, (labour)migration- and climate policy. On behalf of Clingendael, Saskia was part of the scientific staff of the State Commission on 'Demographic Developments 2050', that was appointed by the Dutch government to advise government and parliament on the social and economic impact of demographic developments, in particular ageing and migration. Prior to joining Clingendael, Saskia was the director of The Broker, a Dutch-based knowledge brokering organisation in the field of international development. In 2006 and 2007 she worked at the Netherlands Scientific Council for Government Policy on projects related to European integration and development policy. In 2012 and in 2022 she worked at the Dutch Advisory Council on International Affairs as deputy secretary of the European Integration Committee. Saskia holds a PhD in political science from Radboud University Nijmegen. Her dissertation dealt with the politics of referendum use in the EU.

Bart Hollants MSc. works as Innovation Broker at the NATO Innovation Hub, part of the headquarters of Allied Command Transformation, based in Norfolk, Virginia. The NATO Innovation Hub has been facilitating open military innovation throughout the Alliance for over a decade, stimulating and facilitating member states in pursuing open innovation and coordinating NATO innovation efforts between the two strategic headquarters in Mons (BE) and Norfolk (USA). The NATO Innovation Hub brings together Allies, academia, knowledge centres, and industry. Bart previously worked as an innovation scholar and lecturer at the Copernicus Institute for Sustainable Development at Utrecht University and remains a freelance scholar.

Ir. Danny Janssen is a PhD student at Delft University of Technology and the Netherlands Defence Academy. In his research, he investigates the multifunctional application of military equipment during high-water crises, with a specific focus on the BresDefender. Danny Janssen is expected to defend his thesis in 2024.

Dr. ir. René Janssen is associate professor of mathematics and operations research at the Faculty of Military Sciences of the Netherlands Defence Academy. His research interest focuses on network theory and stochastics related to military operations research.

Dr. Thijs Jeursen is an assistant professor in Conflict Studies at Utrecht University. His current work explores connections between climate change and violent conflict, focusing on the role of militaries as ecological actors. In another research project, "mapping environmental damage", he works on monitoring environmental harm during conflict, analysing the applications of satellite imagery.

Dr. **Relinde Jurrius** works as assistant professor of Mathematics & Operations Research at the Netherlands Defence Academy. Her research and teaching focuses on the application of new techniques in mathematics and computer science to relevant military problems, as well as the theory behind it.

Dr. **Jori Kalkman** is an associate professor at the Faculty of Military Sciences of the Netherlands Defence Academy and was a visiting scholar at the Swedish Defence University. His research focuses primarily on crisis management and disaster response. He is particularly interested in the implementation of these activities by specialised crisis organisations. Recently, he published a book called 'Frontline Crisis Response' with Cambridge University Press, in which he discusses eleven dilemmas that crisis professionals encounter time and again in their work.

Prof. dr. ir. **Robert van de Ketterij** was born in Velsen in 1968. He studied Naval Architecture at Delft University of Technology and received a PhD at the faculty of Applied Earth Sciences, also in Delft. After his study, he held several positions as naval architect at major shipyards in the Netherlands. In 2005, he returned to science in a role as assistant professor at the Netherlands Defence Academy in Den Helder. Between 2007 and 2017, he held various positions in the field of design and development of complex systems in the field of dredging and (deep sea) mining with an increasing focus on improved energy systems and emissions reduction. Since 2017, he has been full professor of Systems Engineering and chair of the section Military Technological Sciences at the Netherlands Defence Academy. His research focuses on complex energy systems of naval ships, emissions and signatures related to the operation of these systems.

Dr. B.M.J. (Berma) **Klein Goldewijk** is the director of cooperation on research methodology for the Faculty of Military Sciences & Higher Defence Education at the Netherlands Defence Academy, Ministry of Defence. She is a senior research affiliate at the Dep. of International and Political History, Faculty of Humanities, Utrecht University, and a research fellow at the Faculty of Military Sciences. Her research interests include armed conflict and war studies, diplomacy and negotiation, international relations, critical theory, and intelligence studies.

Selected publications: War diplomacy in Ukraine: Causes and endings of Russia's military invasions. In M. Rothman et al. (Eds.) *Reflections on the Russian-Ukrainian War*. Leiden University Press; (2021) Why still critical? Critical intelligence studies positioned in scholarship on security, war, and international relations. *Intelligence and National Security* 36(4): 476–494; (2018) (with Joseph Soeters) Peace operations and 'no peace to keep'. In D. J. Galbreath & J. R. Deni *Routledge Handbook of Defence Studies*, 260–271. London: Routledge; (2018), Border security, boat migration and

Mediterranean operations in the frames of securitisation and law enforcement: Causal explanation and process tracing, in: H. Monsuur et al. (Eds.), *Coastal Border Control: From Data and Tasks to Deployment and Law Enforcement*, 63–88. The Hague: T.M.C. Asser Press.

Prof. dr. **Jeroen Klomp** is a full professor on arms export control at the Faculty of Military Sciences of the Netherlands Defence Academy and associate professor of economics at the Wageningen University & Research. His research is mainly concerned with the political economy aspects of arms trade and the strategic competition among states.

Ing. **Dennis Krabbenborg** is a lecturer at the Faculty of Military Sciences (FMW) of the Netherlands Defence Academy. After graduation Dennis worked at a construction company in the Civil Engineering industry on large infrastructural projects. In 2005 he joined the section Military Engineering at the FMW as a lecturer, supporting and facilitating research projects. For these purposes he is also managing the Military Engineering laboratory in Breda.

Major **Sebastiaan Leertouwer**, MA, works as a lecturer at the Faculty of Military Systems and Technologies at the Netherlands Defence Academy. Within the faculty he works in the section of Military Engineering, providing classes for the cadets and midshipmen mixing the operational environment and problems with academic education. In the next few years, he will be conducting research in the field of Military Engineering.

Sarah Lokenberg is a junior research fellow at the Planetary Security Initiative and the EU & Global Affairs Unit at the Clingendael Institute. Her work revolves around conducting research and analysis on climate security and energy security. Core interests underpinning her work are the geopolitics of the energy transition and the security implications of climate change. In addition to her focus on climate- and energy security, Sarah also has an interest in non-state armed groups, rebel governance and legitimacy. She holds a BSc in Psychology with a major in Social Psychology and a minor in Conflict Studies from Utrecht University. She attained an MA in International Relations (cum laude) from Leiden University where she researched under what conditions resource-rich rebels govern civilians.

Dr. **Hans Melissen** is assistant professor of mathematics, operations research and statistics at the Faculty of Military Sciences of the Netherlands Defence Academy. His research interests include the application of optimisation in military and geometric problems.

General (Ret) **Tom Middendorp** is a former Chief of Defense of The Netherlands. He was involved in over twenty different military missions and experienced how climate change is already acting as a risk multiplier. He triggered a public debate in the Netherlands with his speech in the Peace Palace in 2016 on the nexus between climate and security that gave him the nickname climate general. When he retired he founded – and was appointed as the Chairman of – the International Military Council on Climate and Security (IMCCS): a global network of security experts and research institutes from over 40 countries. In 2022 he published his book ‘Climate General’ in Dutch which he dedicated to his children. In 2023 the English and French versions of this book were published and in 2024 it will be filmed in a three-part documentary. Tom joined The Clingendael Institute as a Senior Visiting Fellow and is attached to The Hague Center for Strategic Studies as a Strategic Security Expert. Tom is also the Dutch Special Envoy on European Defense cooperation.

Prof. dr. **Herman Monsuur** is professor of Military Operations Research at the Faculty of Military Sciences of the Netherlands Defence Academy. His current research interests include network theory, search and detection, game theory, the optimal deployment of UAVs, and critical infrastructure security and resilience.

Lieutenant General (Retd) **Richard Nugee** CB CVO CBE has earned international recognition for bringing the implications of Climate Change and Sustainability to the Defence and National Security sectors. After a full operational career in the British Army, as his final role he wrote a Review of Defence’s approach to Climate Change and Sustainability. He was the Non-Executive Director for Climate Change and Net Zero for the Ministry of Defence. He has expanded this policy interest into delivery, as the Chair, Director, and Advisor of several renewable energy and environmental sustainability start-ups. He is CEO of a medical research charity, The Scar Free Foundation, Chair of the Royal NAAFI Board, Director of his own Strategic Advisory Company, a strategic advisor to several consultancies and organisations, including the Hague Centre for Strategic Studies, Oxford University’s Climate Change (In)Security Project and a climate-focused venture capitalist group.

Ir. **Alexander van Oers** is assistant professor of mathematics and operations research at the Faculty of Military Sciences of the Netherlands Defence Academy. His current research interests include numerical analysis, machine learning and partial differential equations.

Irina Patrahau is a strategic analyst at HCSS, part of the HCSS Energy and Raw Materials Initiative and Climate and Security Programme. Her areas of expertise are the geopolitics and geo-economics of energy and raw materials and climate security. Irina's work is focused on the energy transition and its implications for inter- and intra-state relations, with a particular focus on (critical) raw minerals. In addition to her work on the implications of climate change mitigation, Irina is also part of broader HCSS work on the climate-security nexus. She is part of the Water, Peace and Security Partnership, a consortium that seeks to address water-related security challenges through innovative tools and services. Irina holds a BSc degree (cum laude) in Political Science with a specialisation in International Relations from Leiden University and a minor in Geo-Resources for the Future at the TU Delft. She attained her MSc degree (cum laude) in Political Economy from University of Amsterdam, where she studied the energy relations between China and Eastern Europe in the context of the energy transition. Prior to joining HCSS, she was an intern at Karama Europe, an NGO supporting women's rights activist groups in the Middle East and North Africa.

Ir. Maarten Pothaar, born in Sneek in 1996, is employed as a marine engineer at the Maritime Systems Department within the Materiel and IT Command (COMMIT). With a profound interest in sustainable and energy systems for naval ships, he earned his Master's degree in Marine Technology in 2022 at Delft University of Technology. Maarten's commitment to advancing naval technology is evident through his graduation research at the Defence Materiel Organisation (COMMIT was formerly named DMO). Focusing on the energy transition for the replacement Air Defense and Command Frigate, his work resulted in a published paper presented at the International Naval Engineering Conference and Exhibition (INEC) in 2022. Prior to his master's pursuits, Maarten obtained a Bachelor's degree to become a maritime officer in 2019 at the Maritime Institute Willem Barentsz Terschelling. His academic journey showcases a dedication to the maritime industry, coupled with a keen interest in innovative solutions for the sustainable future of naval engineering.

Commander (Ret) Drs. **Jan Pieter de Rooij** is an assistant professor of defense logistics at the NLDA. After 38 years in the Royal Netherlands Navy as a supply officer and several international postings in the Netherlands Antilles, USA and Italy, JP de Rooij retired in January 2018. He initially started as a freelancer, and subsequently accepted a job at the Netherlands Defense Academy, Faculty of Military Sciences as an Assistant Professor in Navy Logistics, with specialty in procurement and material disposal.

Louise van Schaik is Head of Unit EU & Global Affairs. She also coordinates Clingendael research in the field of climate change and sustainable development. In her research she has extensively analysed the EU's performance in multilateral bodies, including in the fields of climate change, health and food standards. She has also published on related research areas such as EU foreign policy, EU climate change and energy policy, EU research policy, scarcity of natural resources and green growth. Louise has published various policy reports, books, academic articles and commentaries. She regularly gives presentations and lectures to various groups of professionals. She was responsible for the acquisition and implementation of several research projects for governments, (international) foundations, the private sector, and others. She has a Master's degree in Public Administration from Leiden University (2003) and a PhD in Political Science from the KU Leuven (2010). Prior to joining Clingendael in 2006, she was a Research Fellow at CEPS, the Brussels-based think tank, for four years.

Colonel (Ret) ir. **Gert Schijvenaars** is an assistant professor in military logistics and information management at the Netherlands Defence Academy and is a retired army colonel. He got his master's degree in mechanical engineering and studied maintenance management at Delft University. He has been working within the NLMOD sustainment organisation on a large variety of assignments and at all different levels. His current research interests focus on IT-asset management.

Ir. **Alexander J.M. Schmets** is assistant professor of Military Engineering at the Faculty of Military Sciences of the Netherlands Defence Academy. He is a physicist with a background in neutron scattering, battery materials, complex fluids, etc. He has co-initiated the international research area of self-healing materials. Currently, his research involves transient seismic effects, explosion protection and emergency response.

Louise Selisny is Research Affiliate with the University of Oxford, where she is a co-founder of the Climate Change & (In) Security Project. She is also an Expert Participant of the International Military Council on Climate Security (IMCCS). With experience across UK MOD, the United Nations, and Amnesty International, Louise currently supports policy development and analysis within a number of defence and security forums, including the All-Party Parliamentary Group for Climate & Security, where she is the Secretariat Coordinator. In addition to being the co-editor of the Routledge Advances in Defence Studies (RAiDS) volume, *Hot War: Climate Change, Conflict and (In)Security* (2023), Louise contributed a chapter focused on Climate Intelligence.

Matti Suomenaro is a freelance Middle East conflict and security researcher with a focus on armed non-state actors, intrastate conflict, and third-party military interventions. His current work includes documenting and analysing conflict and political violence trends in Iraq and climate adaptation in the Arabian Peninsula. He previously worked as a Research Analyst at the DC-based Institute for the Study of War (ISW) advising US policy on Syria and has published research on American, Russian, and Iranian interventions in the Middle East. He holds a Master's degree in Crisis and Security Management from Leiden University and has contributed to research at different Dutch think tanks, including HCSS.

Dr. Tim Sweijjs is director of research at The Hague Centre for Strategic Studies and a senior research fellow at the Netherlands' War Studies Research Centre. His work is multidisciplinary in nature and straddles political science, strategic studies and war studies. He is a board member at the European Initiative for Security Studies where he chairs the War, Coercion and Statecraft Working Group. He is also a research affiliate at the Center for International Strategy, Technology and Policy in the Sam Nunn School of International Affairs at the Georgia Institute for Technology. Tim has advised international organisations, governments and defence departments across the globe. He has provided expert testimony to the United Nations Security Council, the European Parliament, the Dutch Parliament, as well as to NATO's Parliamentary Assembly. He teaches an advanced graduate and executive staff command course on the future of war. Tim holds degrees in War Studies (PhD, MA), International Relations (Msc) and Philosophy (BA) from King's College, London and the University of Amsterdam. His most recent book is on state threat behaviour and interstate crisis escalation over the past century titled *The Use and Utility of Ultimata in Coercive Diplomacy* (Palgrave Macmillan, 2023). Visit the book's website at www.coercivediplomacy.com. His forthcoming volume titled *Beyond Ukraine: Debating the Future of War* will be published by Hurst in March 2024.

Julia Tasse is a senior research fellow at IRIS, where she heads the Climate, Energy and Security Program. Her research focuses on the interlinkages between climate and security. She is the co-director (with François Gemenne) of the Defense and Climate Observatory [hyperlink: <https://defenseclimat.fr/>], financed by the French ministry of Armed Forces. She adds to this research topic a specialisation in maritime affairs and ocean from a geopolitical perspective. She has a specific approach linked to her background in climate sciences (Master in Environmental Sciences) and her experience in the maritime field for various organisations, among which are the World Ocean Council, the Food and Agriculture Organisation of the UN and the French development agency (Agence française de développement).

Recent publications:

- Tasse, J. (2024) Fish stocks, IUU fishing and violence at sea, *Démeter* (to be published).

Job Timmermans is an associate professor of Business Ethics at the Faculty of Military Sciences of the Netherlands Defence Academy. His interests cover the philosophical and sociological issues arising from the intersections of ethics, integrity, and compliance within organisations. He has worked on several projects on Responsible Research Innovation (RRI) at Wageningen University, De Montfort University (UK), and Delft University of Technology.

Prof. dr. ir. **Mark Voskuijl** is professor of Weapon- and Aviation Systems at the Faculty of Military Sciences at the Netherlands Defence Academy. His research is focused on the performance and flying qualities of fighter aircraft, helicopters and unmanned aerial vehicles.
